- **Leggy Locomotion:** With over 100 pairs of legs, millipedes are surprisingly agile creatures. They can move forward, backward, and even curl up into a defensive ball when threatened.
- **Sensory Antennae:** Millipedes have long, slender antennae that help them navigate their surroundings. They use their antennae to detect scents, vibrations, and potential threats.

- **Defense Mechanisms:** When threatened, millipedes have unique defense mechanisms. Some species release a foul-smelling liquid,

while others roll up into a ball and play dead.
